Step-by-Step Guide for Setting Up AWS Academy Learner Lab

---

1. Open AWS Academy Learner Lab from Modules

- Navigate to your **AWS Academy course dashboard**.
- Click on **"Modules"** in the navigation panel.
- Select **"AWS Academy Learner Lab"** and open it.

---

2. Start AWS Academy Learner Lab from Modules

- Click **"Start Lab"** to initiate the environment.
- Wait for the lab to **provision resources** and become active.

---

3. Choose Two Instances and Assign Names

- Open the **AWS Management Console**.
- Navigate to **EC2 Dashboard**.
- Click **"Launch Instance"** and select **two instances**.
- Assign meaningful names like **"Instance1"** and **"Instance2"** under the **Tags** section.

---

4. Generate a Key Pair, Download the .PEM File, Copy the Directory Path, and Open in Terminal

- In the **Key Pair** section, click **"Create new key pair"**.
- Choose **RSA** as the key type and enter a name (e.g., `MyKeyPair`).
- Click **"Create"** and **download the .PEM file**.

Open **Terminal** and navigate to the directory where the `.PEM` file is stored:
cd /path/to/your/keypair

- Set the correct file permissions:
  chmod 400 MyKeyPair.pem

---

5. Launch the Instance Successfully

- Click **"Launch Instance"** and wait for it to **initialize**.
- Verify that the instances are in the **"Running"** state in the EC2 Dashboard.

---

6. Click on Connect

- In the **EC2 Dashboard**, select an instance.
- Click the **"Connect"** button at the top.
- Choose **"SSH Client"** and follow the connection instructions.

---

7. Copy the Provided Example and Execute in Terminal

Copy the given SSH connection command, for example:
ssh -i "MyKeyPair.pem" ubuntu@<Public_IP_of_Instance>

- Paste it into **Terminal** and press **Enter**.

EC2 > Instances > i-022003817a2715112 > Connect to instance

Connect to instance Info

Connect to your instance i-022003817a2715112 (datanode1) using any of these options

EC2 Instance Connect | Session Manager | SSH client | EC2 serial console

Instance ID
i-022003817a2715112 (datanode1)

1. Open an SSH client.
2. Locate your private key file. The key used to launch this instance is lab1.pem
3. Run this command, if necessary, to ensure your key is not publicly viewable.
   chmod 400 "lab1.pem"
4. Connect to your instance using its Public DNS:
   ec2-44-204-34-52.compute-1.amazonaws.com

Example:
ssh -i "lab1.pem" ec2-user@ec2-44-204-34-52.compute-1.amazonaws.com

Note: In most cases, the guessed username is correct. However, read your AMI usage instructions to check if the AMI owner has changed the default AMI username.
